

# FileNation

Right now we are working in a new project called FileNation.

With FileNation you can easily send your files around the World using a new P2P technology called IPFS (InterPlanetary File System).

## **Our team is made up of 4 founders:**

Pol Baladas: founder of Seleactivitat.cat, winner of several hackathon awards and Data Science student at UPC

Joan Viladomat: Spain Country Manager at Landing.jobs, founder of Parkinghood and member of Ouishare.

Alex Sicart: former CTO at Sharge, TED Speaker and Forbes 30 under 30

David Redondo: IT Manager with 11 years of implementation experience, including multiple full cycle international projects.

FileNation is quite young but we already have some interesting achievements:

- Launch of the first functional version of our Product (MVP)
  - First position in the Ranking of HackerNews (one of the most prestigious sites about technology)
- More than 600 stars in GitHub showing the interest of the tech community

Since we are just in the beginning of FileNation and we have a very ambitious roadmap for our product, we are planning to launch an ICO (Initial Coin Offering) to raise funds, grow the team and develop plenty of new features for our users.
