

FileNation

We are all about giving back the Internet to the people, about secure, limitless technologies available for everyone.

MARKET

More than 40 million people today are using the traditional products to transfer their files.
More than 1000 million files are sent every month and this is only related to personal use, not business.

PRODUCT

With FileNation you can already send your personal files using IPFS, a blockchain-based technology. This decentralized approach makes file sharing more secure, cheaper and efficient.

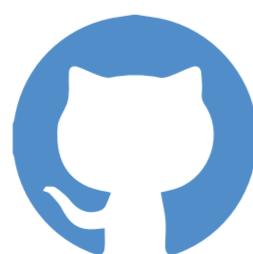

VISION

We are still in alpha version, but working very hard to make our product even more reliable.

We have a pipeline full of ground-breaking features, have you heard about smartfiles?
Besides sending files safely and efficiently we want to take one more step and allow our users to send files that behave differently based on different parameters, this opens a wide range of possibilities never seen before.
Imagine that your file can only be open after you die, or that people need to pay you before they can open your file.

THE TEAM

Alex met Pol when they were 13, they connected from the get go and very soon they started working on their first project to help students.

Alex met Joan at the Audi Creativity Challenge, they worked together in Sharge and made it to Silicon Valley. Joan met David when they were 12, they played basketball together and have been friends ever since.

They all came together to form a balanced team, with industry relevant experience, including blockchain, corporate and startup founder experience.

Alex has been recognized as forbes 30 under 30, Pol is hackaton addicted and started his own companies, Joan has led multiple start-ups and David has 11 years of consulting experience at Accenture.
